Mobile apps AutoCAD applications for handheld devices were introduced in 2007 with AutoCAD LT 2007. Since then, a number of applications have been released to the Apple iPhone, iPad, Android, BlackBerry, and Windows Mobile. For most such applications, only 2D drafting is supported. The Drawings application for the iPhone also allows the user to draw 2D and 3D lines and add geometric 2D and 3D elements to drawings. Drawing objects can be linked to other drawings and can also be shared on Facebook and Twitter, in order to publish the drawing on the internet. These applications are generally not free, but vary in price, most being paid for either by a license or subscription. Computer-based Gantt charts are produced and exported from AutoCAD. There is a feature called Sorting, which allows the application to automatically sort drawings based on the use of named views and smart layers. View types are lists of view

types that are automatically displayed in the appropriate workspace as the drawing is created or saved. Smart layers allow users to combine the properties of one layer type with another to create a new layer type. These types are either static or dynamic. After the download is complete, click Run to run the application. The app will launch and open your Autodesk Autocad application. The popular eSports league that just announced an expansion into the United States has done so to capture a massive new audience, and help maintain the current one. Electronic Arts, the company that owns the FIFA franchise, has partnered with ESL to open a division that will be focused on producing collegiate eSports. "The partnership with ESL will help create a great eSports ecosystem in North America, allowing for the entire community to be able to play, compete and win," EA Sports vice president of gaming Scott Ballenger said in a release. The first season of collegiate gaming will begin later this month with the Collegiate Starleague, a league made up of more than 30 universities across the country. The league's first competition will see Michigan State and Texas A&M duke it out for the right to

call itself "MSU Aggies." A new season of the Starleague will be added to the schedule every three weeks throughout the semester, with a final championship season held in April. As competition grows, so will the viewing audience. "We believe that this new partnership will give eSports a platform where universities can become destinations for their alumni and future students and expand eSports to a new audience in North America," ESL CEO Ralf Reichert said in a statement. "As the popularity of eSports continues to grow, ESL plans to provide the definitive platform for pro gamers, broadcast partners and communities to thrive, both on and off-screen." Reichert noted that professional leagues such as the NBA, NFL and MLB have developed successful platforms, and that it's only a matter of time before those same principles are applied to the burgeoning world of eSports. "There's no doubt that big sports-style leagues are coming," Reichert said. "With the NBA's acquisition of the Sacramento Kings in 2014, the NHL's move into Toronto and expansion into

Las Vegas, and more on the horizon, the eSports world can only benefit from the expertise and success of traditional sports franchises."
