To study the efficacy and safety of bevacizumab (BV) plus gemcitabine and cisplatin (GDP) in treatment of nonsquamous non-small cell lung cancer. Patients with metastatic nonsquamous NSCLC were enrolled into this study. The eligible patients were treated with GDP chemotherapy plus BV and were enrolled into two groups: docetaxel group (GDP+BV+docetaxel) and GDP+BV group. The objective response rate, disease control rate, overall survival time, progression-free survival time, side effects of GDP, and blood tests were evaluated. All patients completed the treatment without any withdrawal. The objective response rate of GDP+BV was significantly higher than that of GDP+docetaxel, with statistically significant difference (P=0.001). The disease control rate of GDP+BV was significantly higher than that of a1d647c40b
