And he said that the private sector already takes care of that... by hiring so many Yes, of course this rambles a bit, and he looks tired. But of course many proposals on the table would cause similar effects to those we see when the poor get unemployment benefits, because this would be a cut of their income. More generally, over at the Cato Institute, there are some more ideas, which are very much in the leftwing tradition. The basic idea, here, is to tax lower-earning (if productive) people so that they pay the majority of the tax burden. From the paper: From this perspective, free-market economists should applaud the fact that the vast majority of Americans have so willingly surrendered a good deal of their income to the government. Government has shifted the tax burden from property owners to wage earners. And because middle-class Americans consume almost three-quarters of their income, this has resulted in a transfer of resources from everyone else to everyone else's self-interest. After all, if the middle class had not given up their incomes to the government, the government would not have had to spend so much of them for welfare benefits and other programs. However, there is another side to this story. A large portion of the overall income of Americans is already dedicated to paying taxes. This is a burden that falls almost entirely on the middle class. So the question is how the rest of Americans can share in the burden of taxation. After all, if the government is free to take more of Americans' income—without their prior consent—the government would have no justification for allowing them to keep at least as much of their income as they would if they did not have to pay any income tax at all. What is the rationale for such a tax shift from the wealthy to the lower-income Americans? One possible justification is that a reformed income tax will reduce income inequality. That may be an important objective, but there are very good, possibly better, ways to achieve that objective. And while no one should disagree that income redistribution should be pursued for other reasons, the bad funding for Social Security, Medicare, and Medicaid is a problem that must be dealt with first. There are some other criticisms, that come from the conventional wisdom. But one can only hope that they are disproved in the next 20 years. One final point: Some people argue that the US and Europe are largely comparable, and that both have "

TIPS • As you resize images with the Move tool, you can also place a bounding box around your photo to keep the size of your image constant. As you are working with images with a lot of detail, it is better to keep the size of the image uniform. Otherwise, you run the risk of distorting some of the details in your image. * * *
