Project management AutoCAD supports project management for creating, viewing and reporting on project plans. A project plan is a collection of tasks which are planned, scheduled and budgeted. Project management is an essential part of AutoCAD and is available as part of the AutoCAD LT package. The project management tools include: Project Plan Wizard, a simplified wizard to create a project plan with predefined options Project Calendar, a calendar to display tasks which are linked to milestones Project Budget, an overview of the budget for the plan Project Scheduling (in AutoCAD LT only), a Gantt chart, allowing you to create a schedule Project Tracking (in AutoCAD LT only), a bar chart showing the completed tasks Project Dashboard, which includes graphs and reports of the plan's progress Project Schedule (in AutoCAD LT only), which allows creating a schedule based on the project plan and allows you to generate task lists The Share Plans capability allows a user to create a project plan and share it with one or more other users. The project plan can be sent as a file, to a sharepoint or FTP site or sent as an email. This is useful for team planning. AutoCAD has two versions of project management: AutoCAD LT (installed) is a free, basic version of AutoCAD. AutoCAD Business (installed) is a commercial version of AutoCAD for enterprise users.
