
Sims 4 More Floors Mod

As far as I know the maximum height of a building in sims3 4 is including attics. However, I saw a building that was significantly taller than 4... How can I do this You can do this with construction tools like Height and Height. This is also possible with a custom construction simulator. Not to mention that you can build, but also be able to change the height of the building at any time. Depending on the level of the building, there is a higher or lower level. This means that once you've built something and made it "tall", you can change its height if you like.
