Many people use Photoshop in much the same way as a typewriter with a few modifications. We recommend that you read the Help menu for better tutorials and learn to use Photoshop appropriately before you start any major edits to an image. Here are tips that will get you started on your journey to Photoshop mastery. Photoshop 101 Making and saving a new image The most important thing to remember when using Photoshop is that you have to start with an image file. No matter how beautiful your images are on paper or via scanner, when you save an image, it usually gets saved as a file of the JPEG format, which has a maximum of 1,872,000 pixels. To save an image, do the following: 1. Click the Save icon from the File menu, as shown in Figure 9-1. 2. From the Save As dialog box, choose the folder location where you want to store your image file. A default path is included. For now, you need to use this folder to save your new images. 3. In the Save As dialog box, from the File Type drop-down menu, choose JPEG and click OK. Image editing basics The image-editing process usually starts with the Start menu. From here you can open an image file, create a blank image, add a background, apply special effects, and more. To open an image in Photoshop, do the following: 1. From the File menu, choose Open. 2. In the Open dialog box, navigate to the folder and click Open. You can change the Open method to fit your needs. The other ways to open a file are as follows: • You can open an image as a web page by choosing File⇒Open Page. • You can open an image from a disk with the CD/DVD Burner (Windows only) or Send To option (Mac only). **Figure 9-1:** The familiar Photoshop Start menu has a few advanced options as well. • If you're using an older version of Photoshop, you can open a Photoshop file from the Photoshop Archive; select the file and then select Open From Archive (Windows only). In this chapter, we explain editing in detail by going through a process of a few simple exercises. We're sure you'll find that the techniques will work for you when you need to make adjustments to your images, whether it

allum-vishal I'm an iOS engineer at Pinterest. The nature of the work is different in a way. You might find the analysis interesting. ~~~ agibsonccc FYI, there are many iOS engineers at pinterest in addition to of course the business folks. :) ----- andrewla I really like the use of design systems. It's very easy to get started with one, as you have to just copy in your resources (css/scss, images, etc.) rather than rebuilding the entire system. I think, if you're just using code as your primary documentation tool, then you might as well generate the project from it. Like the author, I'd be interested to see the outcome of building a design system by following the git-flow model, as this should be an exercise in providing documentation on a regular basis. ~~~ lordalchis We are using git-flow in the design system as we are still in the early stages. Since it's for an internal project it is not open source. ~~~ andrewla I wouldn't say early stages, but very actively developing, given the volume of PRs and discussions in the design system thread in the actual GitHub repo, and the large number of PRs I see by the owner of the design system on literally every single commit. ----- fierro Yes, there's lot of documentation but I don't think it is clear to follow the philosophy of git-flow. The author seems to think that the goal of the workflow is to provide solid documentation. But maybe git-flow is there to provide a consistent development environment and a simple place to start on the project and git-flow is just good for that? ----- giancarlostorero > The goal of documentation is to share information about the code, and not > project structure Then what's the point? Why not just use git? You can do both at the same time. You'll have to install a git GUI of course for good UI support like we used to have back in the 90s. ~~~ andrewla It's still a good point. I mean, if you want to go to the trouble of writing docs, you might as well go

Potentiation of drug interactions between bupropion and cocaine, and cocaine alone in humans. The combination of bupropion and cocaine is synergistic in vitro. In the current study, 6 volunteers received placebo, bupropion, cocaine, and the combination of bupropion and cocaine, in randomized order, with a 3-week washout period between treatments. Each study day included an initial screening period of 2 hours, in which subjects were administered the study drug or placebo; a 2-hour dose of cocaine hydrochloride (0.7 mg/kg) was administered 1 hour after the study drug or placebo, and a probe cocaine challenge (1.2 mg/kg) was administered 1 hour after the initial dose. Plasma concentrations of bupropion, cocaine, and norcocaine were determined by gas chromatography/mass spectrometry. The bupropion-cocaine combination produced a significant increase in the area under the plasma concentration-time curve for cocaine, with median [range] increases in maximum plasma concentration (C_{max}) (47.4 [31.3 to 78.9] vs. 7.6 [7.6 to 12.6] ng/ml; p < 0.05).
