## **DrugFormatica [32|64bit]**

Information about drugs is extremely important in both the doctor's office as well as the pharmacy. However, a lot of the data is either proprietary or otherwise restricted from public use. A common example is that of trade names, which are often used for creating the brand name for a pharmaceutical product. The brand name can be hidden inside another name, and it can make it difficult for consumers to understand what is being sold or even who the drug company is. Additionally, the correct dosage of a medication can be critical in determining the effectiveness of the treatment. A common mistake is to take too much of the drug, leading to a dangerous side effect. Dosage confusion can also lead to a lack of response to the medication, or long-term side effects. Fortunately, the right drug at the right dose can improve a person's quality of life significantly. This is a web based application that displays dosage and drug information. The application allows the user to search the database using either a list of drug names, or a drug name. Each entry in the drug database has a title, an ingredient list, the route of administration and a calculated dosage. Based on the user selected drug, an ingredient list is displayed and, depending on the drug, an appropriate route of administration may be suggested. The user can then manually enter an ingredient name and it is added to the list. The application then calculates the dosage appropriate for the user's selected medication and displays it on the screen. Because of the simple interface, it should be possible to add medications to the database without specific knowledge about how the pharmaceutical industry works. The database currently contains information about 9,400 drug names. The user enters the name of the selected drug and an ingredient list is displayed. The user can then enter drug ingredients either in a text box or by scanning barcode. Once all of the ingredients are entered, the user can then click on calculate and the dosage is displayed on the screen. The application then stores the information in an XML format that can be downloaded to a variety of different media. The data will not be transferred to the server, but will be stored on the user's computer in the application's file directory. The file can be copied to multiple locations and opened in a data base application. It will display drug information correctly as it is stored in the XML file. The information entered by the user can be stored in the.INI format. The files can be easily shared among multiple computers. DrugFormatica was designed to provide a simple medication database with

## **What's New in the DrugFormatica?**

---

DrugFormatica is a comprehensive online drug database containing trade names, brand names, generic drugs and their pharmacology. Users can search the entire database from a simple user-friendly interface and browse through the database. DrugFormatica will not only provide you with the drug facts but also help you get the right information regarding it. Using the database is very easy and one can get started with just few clicks. You can search the database by keyword, search by section or by a specific drug. Once you choose a search option, DrugFormatica will display all the related information about the drugs. DrugFormatica also provides a number of options for users to view the information they are searching for. As a leading manufacturer of all pharmaceutical products, including liquid and injected medications, devices and medical supplies, we have a global presence and can supply you with any product. Facts about the Drugs

The drugs are medical preparations and hence, the drugs need to be tested to ensure its safety before being marketed. The FDA approves the safety, efficacy and labeling of the drugs. Drugs are categorized based on certain characteristics that include the product name, intended use, efficacy, dosage form, route of administration, FDA actions, general class, whether a new drug and a copy of all labeling that applies to the drug. All the drugs are manufactured with a particular purpose and they are prescribed to cure certain diseases. The diseases include such conditions as ulcers, diarrhea, infection, headache, hypertension, and so on. The FDA publishes labeling information for drug products, doctors, patients and the public. A drug is a chemical or biological substance that is used as medicine. The term is usually associated with potent medicines that are administered in a sustained or controlled manner. Different drug products have different names, such as tablets, injections, and oral solutions. They are also called preparations, formulas, and medicines. Each drug is tested for its safety and effectiveness in clinical trials before it is put on the market. Drugs are categorized into three different classes: prescription drugs, OTC drugs and dietary supplements. The U.S. Food and Drug Administration (FDA) is responsible for regulating and inspecting the manufacturing, distribution, and marketing of drugs, medical devices, and biological products. The authority for the FDA is the Federal Food, Drug, and Cosmetic Act of 1938. The MGR5, Inc. is an online pharmacy that offers prescription and over the counter drugs and a host of other
