Bakery Simulator is an educational game that will teach you baking and cake making in a fun and immersive way. This game will motivate you to bake cakes and learn all the basics you need to make amazing cakes. You'll also learn all the ingredients, techniques and tools you need to make the best cakes you can. If you're a baker who wants to learn baking or a cake lover, this game is designed just for you. This Bakery Simulator will help you make the best cakes for your friends and family. Plus, every time you create a new cake you get rewards, including cake decorating patterns, cake balls, and icing to top your cake. You can also use the money you earn from baking cakes to buy new ingredients and tools. The game contains gameplay with multiple objectives and various levels. Even if you don't have a lot of baking experience, you'll still be able to build a strong foundation and learn all the baking and cake making skills you need to make amazing cakes. This game is designed for all kinds of players, no matter what their experience level is. You can start by picking a basic level, and work your way up to the more advanced levels. You can also switch between levels easily, and complete the challenges at your own pace. As you go through the game you'll earn helpful tips on the cooking process. You'll learn about ingredients, tools, and cake making techniques that will allow you to make delicious cakes and desserts. You'll find yourself inspired to try out the new recipes and learn how to make the perfect cake. You can find all the recipes for baking cakes, pies, cookies, cupcakes, cakes, pastries and more! Bakery Simulator is an easy to play game that is great for beginners, as well as experienced players. Update: Version: 1.3 What's New in this version: 1. New Camera Mode: Added a new Camera Mode which allows you to switch between free camera and perspective camera easily. In the free camera, you can start to bake cakes as soon as you open the game. It allows you to bake high-level cakes while keeping the game in a non-perspective mode. You can also use the camera easily to view the baking process. 2. Added 360° camera: Added a new camera option to allow you to view the baking process from different angles, including a 360° camera.

Features Key:

Innovative card design which gives a totally different feel to the games

2 big question cards at the start which decide what cards the players will start with

2 classic A-K scoring cards,

4 different scoring cards from K thru Q

Each of the 12 SIDE games presents a unique deck mix,

All class games are from the Java Collection of Games Web site.

Dark Cards Completely New Chip Scoring Application

In most Card Scoring Application, you score your hand by counting the number of cards in your hand.

In Dark Cards you score by using a sliding scale which starts out at 100 (10 different levels on the scale) where a hand with ten cards or less can receive a perfect 10.

As a player gets a higher hand, the weighting of the score drops until at the bottom of the scale (0) you must have a full 54 card deck with two cards left to get that 0 point.

Dark Cards Download Links

XML File - Use the Link on your left to download the XML file, you also need to download the JDK file as well from Java Web site. Note that the java file is not included when you download the xml file.

Gecko Viewer Support - This version of the application should work without having to download the XML file. xhtml with the gecko viewer should work without having to download the jai file. for jdk 1.5.0 or higher you need the jai file as well. You can download the jai file from Java Web site.

Convenient store API

The store's API provides a callback mechanism that allows certain actions (for example, a buy() or cancel() method) to be carried out without having to open the browser and fill out a form. This is very convenient when one wants to execute a long-running process to access content from the store. The following diagram shows a typical use of the store's API:
