TMP-SMX is a combination of trimethoprim and sulfamethoxazole used to treat bacterial infections. To date, it has been suggested that the uptake of TMP-SMX into Escherichia coli bacteria is facilitated by the active transport system. However, further studies on a molecular level of the uptake process were conducted. In this work, we conducted in silico studies to find out possible binding sites of TMP-SMX on the ribosome of E. coli. The presence of different metal ions as well as TMP-SMX in the experimental conditions of the experiments was verified. The metal ions are co-crystallized with the ribosome and are present in the crystallization matrix. It is shown that the metal ions help in the development of crystals that

grow into the same size as those in experiments without the metal ions. This e79caf774b
