Moral education is a vital function of the community. Adolescent education is a particularly important context for moral growth. Health care practitioners are in a position to educate adolescent health care consumers, but their success will be determined by many factors, including their own knowledge of ethical values and the culture of their institutions. However, there is little research evidence about how moral education might be improved. In this article, we will review the literature on the health care practitioner's own knowledge of ethical values and the culture of their institution. In particular, we will explore the implications of this lack of knowledge for clinical practice, the ethics of the health care system, and the practice of health care educators. We will review the research and then formulate a set of recommendations for the practice of health care educators and for the health care system as a whole.Interactions of H2O and O2 on the (111) surface of YBa2Cu3O7- δ : a two-step Langmuir-Hinshelwood mechanism. The (111) surface of YBa2Cu3O7- δ (YBCO) has been found to interact in two distinct steps with molecular oxygen at 77 K. O2 initially adsorbs on the surface at low coverages ($\theta_{O2} =$

Track parts as they move. Hold down the spacebar to mark the last known position of a drawing object. Then use a Quick Access tool palette menu to activate the Track tool. The tool follows the object to its new position on the screen, even if the object is colliding with other objects. This tool can be used to precisely track movement of drafting components and harden them on the screen. (video: 4:50 min.) By default, 3D views appear on the screen during printing. However, for enhanced printing, you can customize each view to use a 2D projection for printing. You can also print to the printer from the viewport, as long as your settings allow that. (video: 1:35 min.) Create alternate views of your project for better communication. Switch from a hidden view to a viewport and use advanced toolbars for plotting, splines, and text. Use the option to format the viewport to match the view you're creating. To quickly switch between different views, press the spacebar. (video: 1:14 min.) Apply perspective and orthogonal views on the fly. Easily import components from a package and position them as if they were in 3D. The imported components show on-screen while you add geometry. (video: 1:41 min.) Raster image tools have been enhanced with the ability to make global adjustments to the image. Move and resize the entire image to fit your design. Choose From a window to apply changes to an entire image. (video: 1:27 min.) Reposition views on the screen quickly. Use a camera icon at the top of the 3D viewport. Drag and drop it to reposition a 3D view in 2D viewport. (video: 1:15 min.) Freeze and unfreeze CAD models. Use the Freeze tool to quickly freeze the image of a file. Choose the type of freeze to suit your needs. Then unfreeze the file to complete the job. To freeze and unfreeze any file at once, use the freezefreeze command. (video: 1:30 min.)
