Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

To edit or work with multiple images at once, you can add a canvas to Photoshop and use a series of tools, previewing your changes without leaving the original image. For example, you can change one image's color, while the original is displayed within the canvas for backup. You can also use the **Quick Tools** to add annotations, masking, or banding to images. Or you can adjust a group of images in the Hue/Saturation tool, removing their color. Some questions on Embed Sources:

- If possible, would it be possible to convert all embedded files from PSD, etc. to JPG (my e-mailing protocol for images is JPG)?
- I notice that Embed sources don't have links to the original image, even though when you open an Embed source in Photoshop, Elements or Aperture, you can see the original. That's one reason why I'm asking about converting JPG --> PNG.
- If the only way to see the original image is to open it in Picture View, does it mean you can't do anything with the picture?

To support its new cloud features, Photoshop CS5 also has the AirDrop and Get Linked features. I wasn't sure, at first, if these AirDrop and Get Linked features were really going to provide any advantage. And I'm sure glad that the AirDrop feature is there. Photos and videos can be shared in a way that files can be shared with dozens of computers simultaneously. That's useful when you need to share files with people who are not in the same place, like with grandparents, for example. You have no such advantage in Lightroom, which only allows you to share directly from within Lightroom.
